

Evian Natural Spring Water - Annual Water Quality Report

At Evian we are proud of the quality of our products. Evian Natural Spring Water is distributed nationally and meets or exceeds all bottled water standards for quality and safety at the Federal and state level. The US Food and Drug Administration (FDA) regulates bottled water as a food. Our scientists and independent certified laboratories perform extensive tests on the water source and finished bottled water product to ensure we exceed or are compliant with all Federal and state bottled water requirements.

In addition to existing stringent regulatory standards, the International Bottled Water Association (IBWA) maintains a strict Model Code of quality for its members. Evian is a member of IBWA and meets or exceeds the quality requirements of the IBWA's Model Code. Additionally, we take pride in the fact that our bottled water production plant is annually inspected, on an unannounced basis, by an independent testing organization, NSF International (NSF). Based on unannounced annual plant inspections and product testing, NSF certifies that Evian Natural Spring Water complies with federal and state bottled water regulations and IBWA's Model Code. NSF is located in Ann Arbor, Michigan. For more information about IBWA and NSF, please visit their websites at <http://www.bottledwater.org> and <http://www.nsf.org> or call IBWA at 1-800-WATER-11 and NSF at 1-800-673-6275.

Evian Natural Spring Water Source

Evian Natural Spring Water begins its journey as rain and snow at the top of the French Alps. It takes at least 15 years for every drop of Evian to filter through the glacial sand formations of the French Alps. It is also during that long journey that Evian acquires its unique, well-balanced, mineral composition. Evian's mineral composition has remained unique since it was first recorded in 1807, an additional proof of its quality.

Evian Natural Spring Water Bottling

Evian Natural Spring Water is bottled exclusively at its protected natural spring source (Cachat Spring), which

lies at the very foot of the French Alps, far from any urban or industrial development. The Cachat Spring name is clearly stated on the Evian's label. Evian's source is approved by several regulatory agencies based on a detailed and extensive review.

The high quality of Evian both at the source and after bottling is controlled by analytical tests. These tests verify that the water is not contaminated in any way. Several hundred tests are performed daily both on the source before the water is bottled and on the finished product to verify the constancy of the mineral composition, the absence of pollution and the quality of the plastic bottles. The stainless steel piping from the spring directly to the plant and the filling equipment are designed to protect Evian's purity, in addition to the automated bottling equipment which is maintained under strict sanitary conditions.

Water Quality Data

Attached is a copy of our most recent extensive water quality testing conducted by the independent certified laboratory, NSF. The NSF Report lists the water quality test results for over 175 substances including inorganics (metals, minerals, etc.), organics (pesticides, herbicides, etc.) and microbials as well as physical parameters. Evian Natural Spring Water is analyzed for both regulated and unregulated substances. This Report contains the substance analyzed, approved test method used, test result, minimum detection limit, measurement unit, date analyzed and FDA Quality Standard for bottled water, if applicable. The FDA Quality Standards are the maximum allowable levels for over 80 substances in bottled water.

Evian Natural Spring Water is in full compliance with all federal, state and industry bottled water standards.

Terms:

“statement of quality” – The standard (statement) of quality for bottled water is the highest level of a contaminant that is allowed in a container of bottled water, as established by the United States Food and Drug Administration (FDA) and the California Department of Public Health. The standards can be no less protective of public health than the standards for public drinking water, established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health.

“maximum contaminant level (MCL)” – The highest level of a contaminant that is allowed in drinking water, established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health. Primary MCLs are set as close to the PHGs as is economically and technologically feasible.

“public health goal (PHG)” – The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

“primary drinking water standard” – MCLs for contaminants established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Treatment Processes: Harmless naturally occurring iron and manganese minerals are removed for aesthetic purposes from less than 20% of the Evian Natural Spring Water resource through the use of Greensand Filtration (manganese dioxide sand).

FDA's website for recalls: <http://www.fda.gov/opacom/7alerts.html>

Our product has been thoroughly tested in accordance with federal and California law. Our bottled water is a food product and cannot be sold unless it meets the standards established by the U.S. Food and Drug Administration and the California Department of Public Health. The following statements are required under California law:

"Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the United States Food and Drug Administration, Food and Cosmetic Hotline (1-888-723-3366)."

Evian Natural Spring Water California Bottled Water Report

"Some persons may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, including, but not limited to, persons with cancer who are undergoing chemotherapy, persons who have undergone organ transplants, persons with HIV/AIDS or other immune system disorders, some elderly persons, and infants can be particularly at risk from infections. These persons should seek advice about drinking water from their health care providers. The United States Environmental Protection Agency and the Centers for Disease Control and Prevention guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791)."

"The sources of bottled water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water naturally travels over the surface of the land or through the ground, it can pick up naturally occurring substances as well as substances that are present due to animal and human activity. Substances that may be present in the source water include any of the following:

- 1. Inorganic substances, including, but not limited to, salts and metals, that can be naturally occurring or result from farming, urban storm water runoff, industrial or domestic wastewater discharges, or oil and gas production.*
- 2. Pesticides and herbicides that may come from a variety of sources, including, but not limited to, agriculture, urban storm water runoff, and residential uses.*
- 3. Organic substances that are byproducts of industrial processes and petroleum production and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.*
- 4. Microbial organisms that may come from wildlife, agricultural livestock operations, sewage treatment plants, and septic systems.*
- 5. Substances with radioactive properties that can be naturally occurring or be the result of oil and gas production and mining activities."*

"In order to ensure that bottled water is safe to drink, the United States Food and Drug Administration and the State Department of Public Health prescribe regulations that limit the amount of certain contaminants in water provided by bottled water companies."

Test descriptions preceded by an asterisk "*" indicate that testing has been performed per NSF International requirements but is not within its scope of accreditation.

The reported result for Odor, Phenolics, Potassium, Specific Conductance and Total Residual Chlorine cannot be used for compliance purposes within the State of Arizona.

Notes:

- 1) Bottled water sold in the United States shall not contain Fluoride in excess of the levels published by the USFDA in 21 CFR Part 165.110. These levels are based on the annual average of maximum daily air temperatures at the location where the bottled water is sold at retail. Please refer to the most current edition of the regulation to determine the Fluoride maximum level that pertains to your product.
- 2) A blank on the FDA SOQ column indicates that no maximum level has been established by the FDA for that contaminant.
- 3) An ND result means that the contaminant was not detected at or above the detection limit for the instrument.
